

Cleaning and Sanitizing Richland Parish School Buildings

Properly cleaning and sanitizing facilities is vital in preventing the spread of infectious germs and diseases. Our schools should take preventive measures to sanitize your facilities. Proper sanitizing techniques include using germ- and bacteria-killing products. Sprays can be used on door handles, telephone receivers, and water fountain areas. Liquid germ killers can be used for more widespread areas such as floors, tables, desks, chairs, benches, and other areas where young people congregate.
